

The graph displays a highly volatile metric over 1000 iterations. The y-axis is labeled from -10 to 10 in increments of 5. The x-axis represents iterations from 0 to 1000. The metric starts at approximately 4.5, drops sharply to -8 at iteration 100, then rises to a peak of about 10 at iteration 200. It then fluctuates between 0 and 10 until iteration 400, where it drops to around -5. It remains relatively stable between -5 and 0 until iteration 600, where it drops to about -8. It then rises to a peak of about 10 at iteration 700, and finally settles around 0 for the remainder of the iterations.
